

# Insight Plant Health

*Your partner in biological product development*

### Formulation development

Insight has experience and expertise in development of liquid and dry formulations of Gram positives, Gram negatives, and fungi for seed treatment, foliar and in-furrow applications.

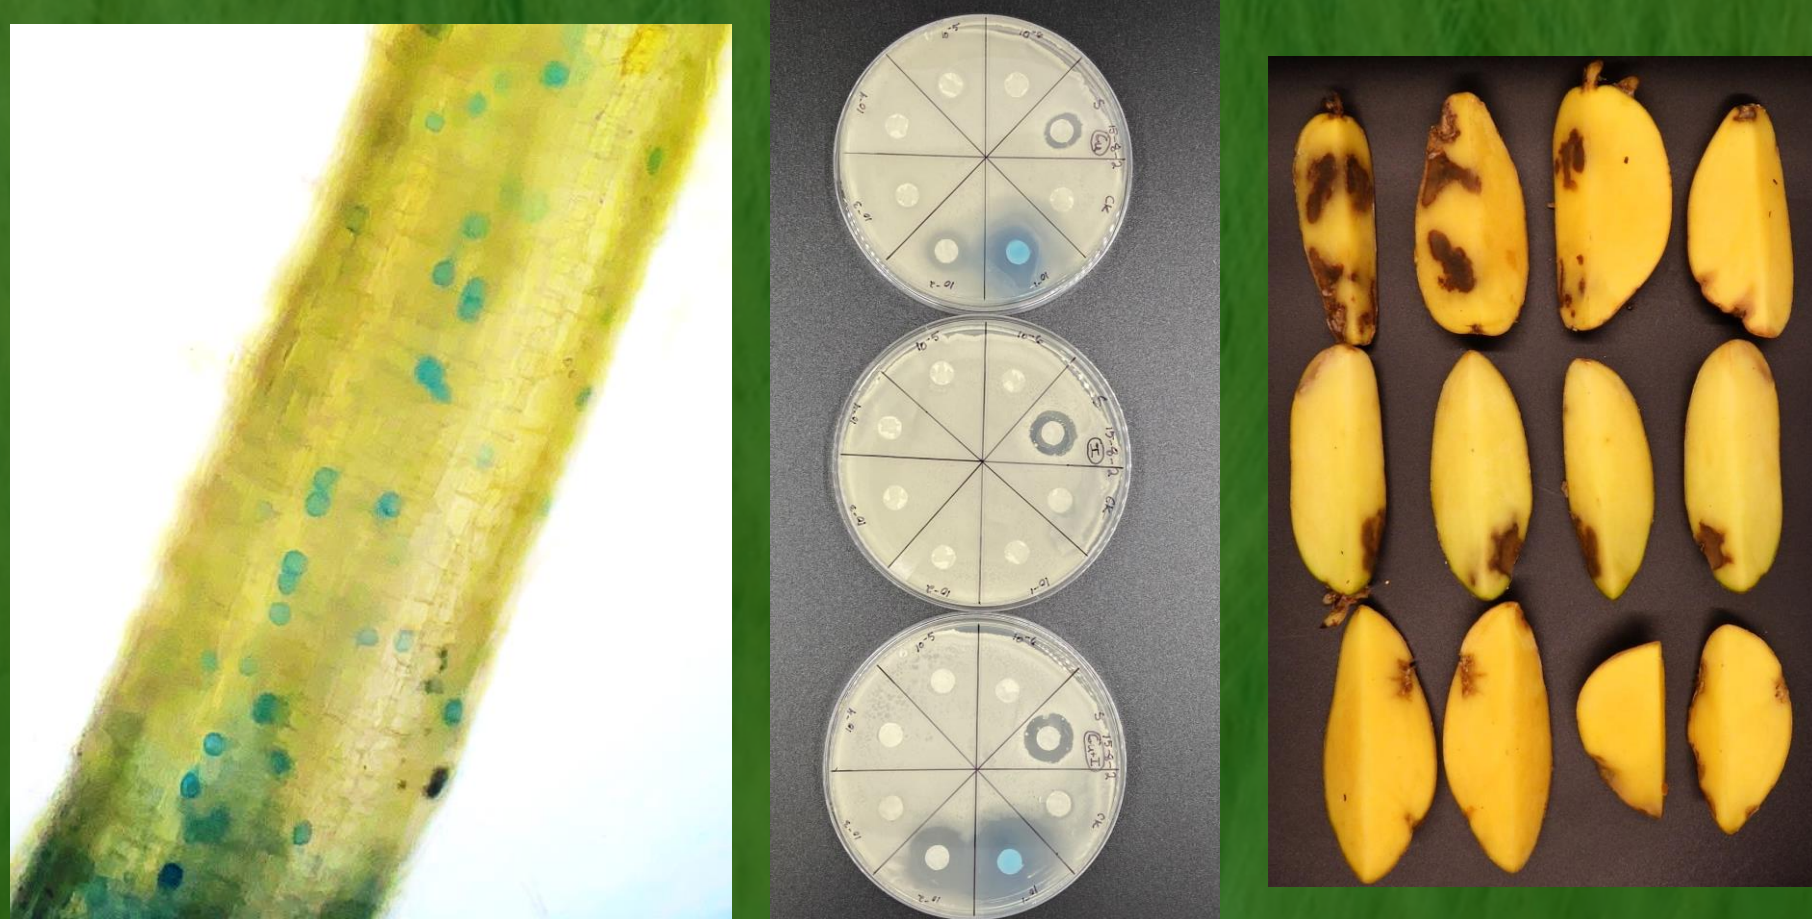

### Strain characterization

Insight can show your strain in action! Looking for definitive proof of root, leaf or soil colonization? Let Insight show your customers how the product works.

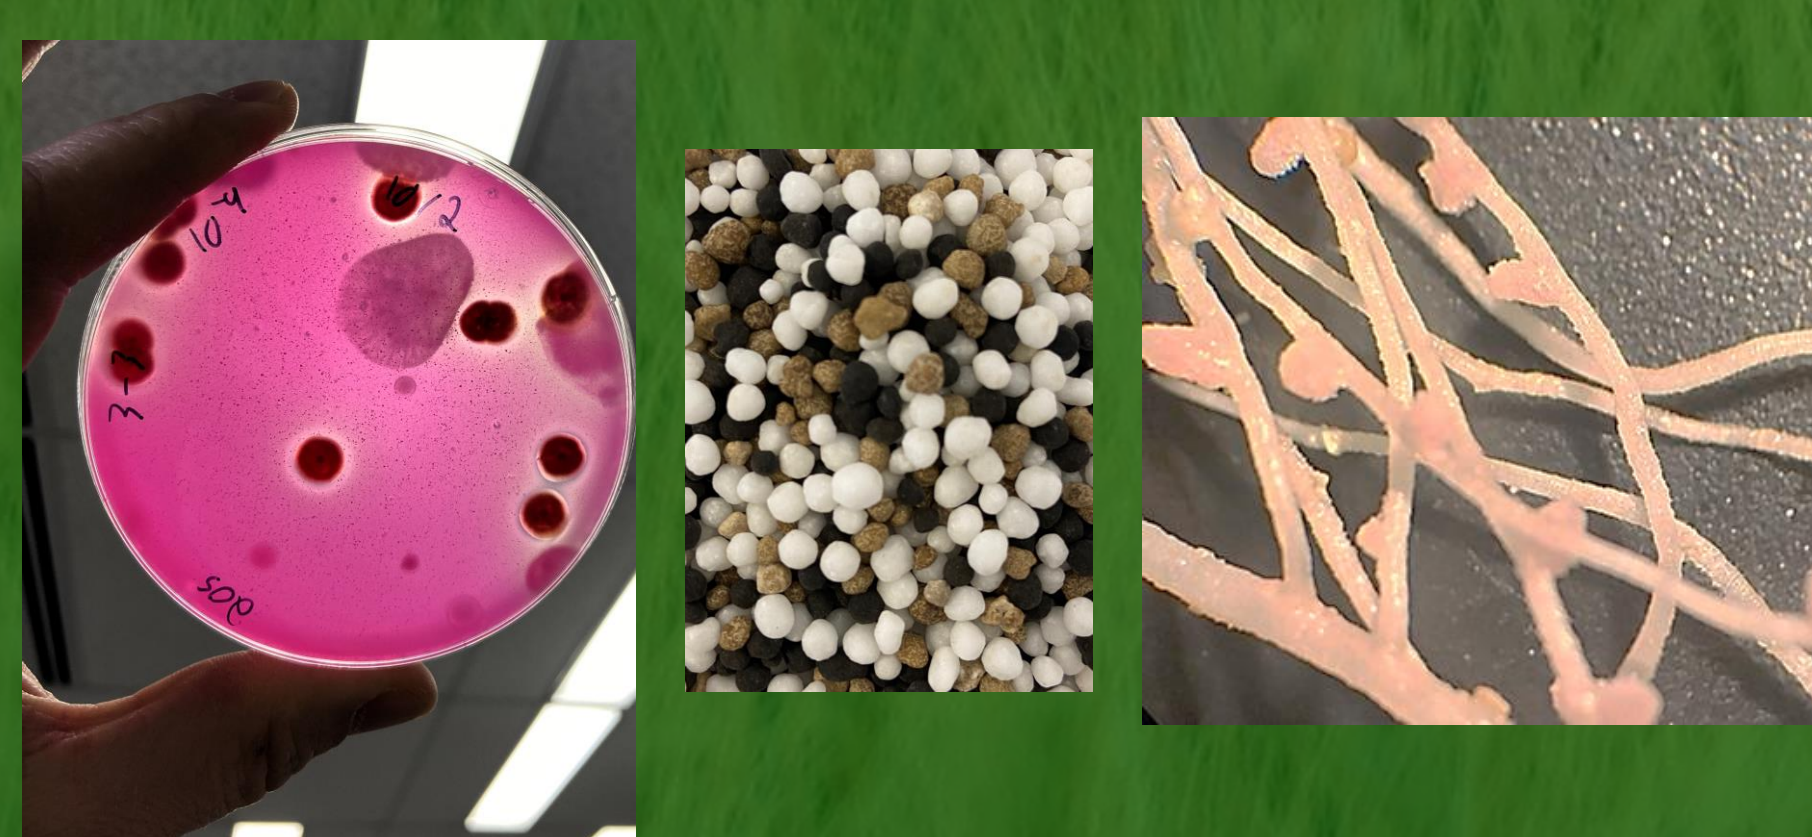

### Biostimulants

Let Insight measure your product's impacts on plant growth and how these changes increase yield.

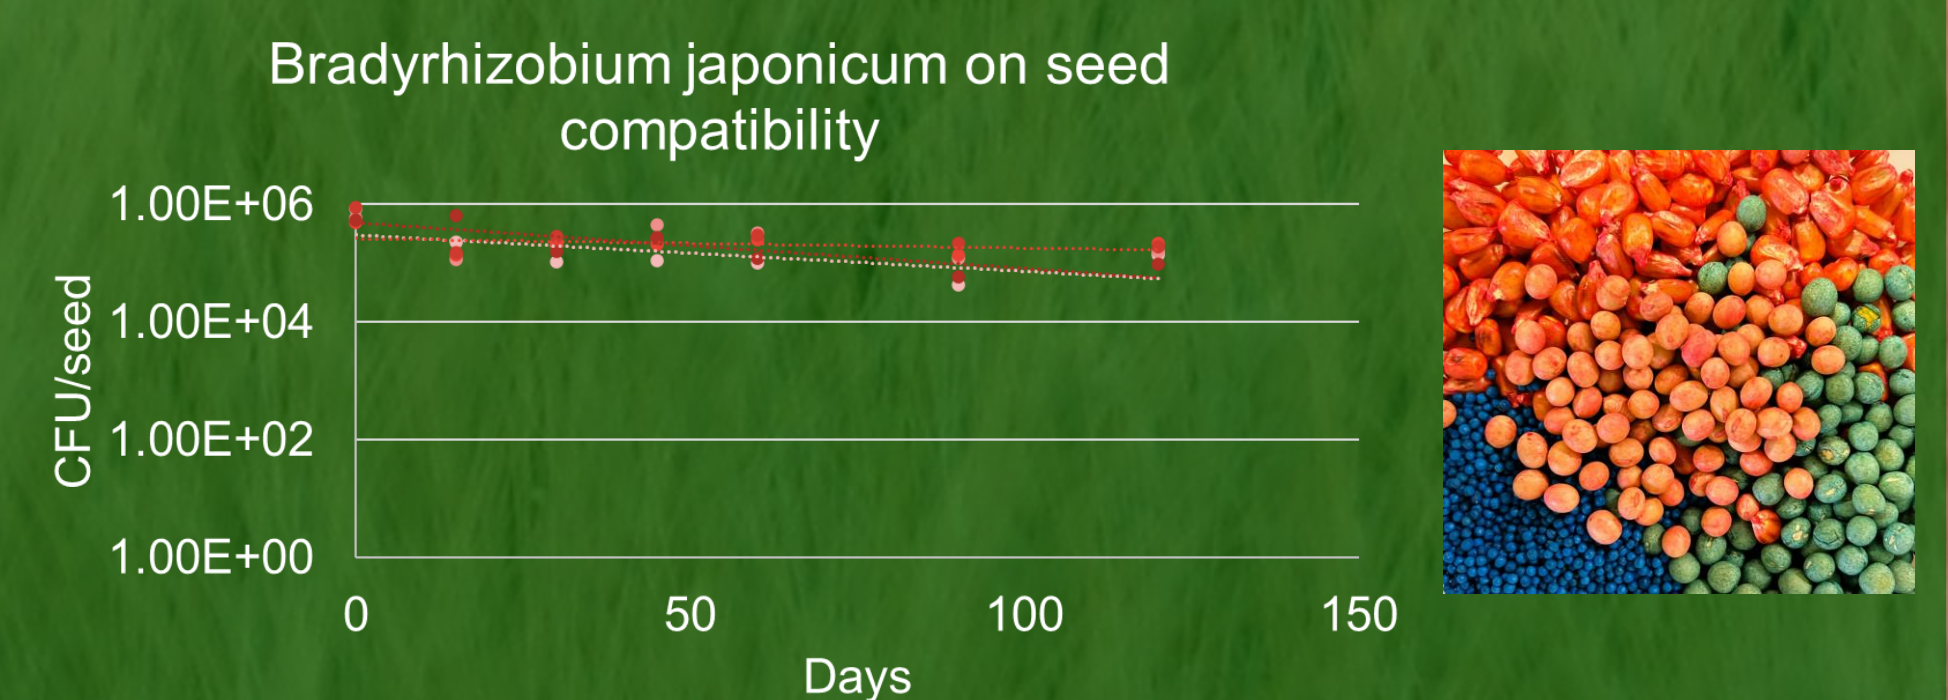

### Biocontrols

With an in-house collection of over 60 plant pathogens and access to many others, Insight can demonstrate your product's range of efficacy by rate and target.

### Nutrient acquisition & delivery

Insight can demonstrate your product's ability to fix nitrogen with <sup>15</sup>N-enriched microbial growth and plant uptake assays or to solubilize phosphate via acidification, organic acids or enzymes.

### Compatibility & stability

Insight can define your product's shelf life and compatibility with other crop protection products in tank mixes and on treated seed.

With over 35 years combined experience in the testing and development of ag biologicals, Insight Plant Health can provide the support you need to register, market, and sell your products. *Insight develops the data – you own the IP.*
